

HITRUST Certification

As technology plays an ever-increasing role in healthcare, secure data transmission and storage becomes exponentially more critical and complex. This is further complicated by the myriad of requirements from both federal and state governments as well as third party organizations – not to mention increasing focus from hackers and others with malicious intent. Ensuring adequate data security is now a critical requirement for all covered entities and business associates.

Working with an experienced provider, such as TECH LOCK, to achieve a HITRUST Certification helps to ensure your organization meets the requirements defined by IT and healthcare professionals in the Common Security Framework (CSF) to ensure ePHI is appropriately safeguarded. HITRUST unifies the regulatory and standards requirements from NIST, HIPAA, ISO 27001, PCI DSS, FTC, COBIT and today is the most widely adopted security framework in the US healthcare vertical.

Increasingly a requirement to operate in the healthcare space, HITRUST enables your organization to demonstrate you have a security framework that incorporates a variety of standards and regulatory requirements. It also offers a recognized, objective benchmark from which you can manage and measure your compliance and security measures.

“HITRUST enables your organization to demonstrate you have a security framework that incorporates a variety of standards and regulatory requirements.”

WHY USE TECH LOCK?

TECH LOCK enables organizations to navigate, detect, and respond to today's modern cybersecurity and compliance challenges. Our focus is adaptive managed security services. Security operations, industry-leading technology, premium threat detection, enriched with independent cyber research. Cohesive security and compliance services delivering measurable outcomes and personalized support to our clients. TECH LOCK is uniquely qualified to perform PCI QSA/ASV, HITRUST CSF, HIPAA/HITECH, FISMA, as well as ISO 27002, NIST SP800-53 and SOC 2 assessments.

HITRUST CERTIFICATION SERVICES

HITRUST CSF ASSESSMENT OPTIONS

TECH LOCK offers covered entities and business associates two assessment options that align with the CSF: Self-assessment or validated assessment.

HITRUST CSF Self-assessment

TECH LOCK can help customers do a HITRUST self-assessment. We can provide our knowledge of understanding the requirements and unique scoring of the standard. Completing a self-assessment will help customers new to the HITRUST framework understand how close they are to certification when having a validated assessment. TECH LOCK has the knowledge and expertise to help clients reach their goals of certifications.

HITRUST CSF Validated assessment

TECH LOCK can audit and complete a validated assessment with the customer. Validated assessments can lead to HITRUST certifications based on the validated assessment score. It is recommended that new clients do a self-assessment first to understand where they are at. TECH LOCK can also assist through a validated assessment, making the process streamlined and help understand all aspects of the audit.

TECH LOCK STRENGTHS

TECH LOCK is one of the few assessor firms accredited by the HITRUST Assessor Council based on its qualifications and experience as a CSF Assessor organization.

TECH LOCK works with your organization as a partner to assist in any required remediation to help ensure a successful HITRUST Certification.

In addition to their extensive experience as auditors, TECH LOCK assessors also possess deep technical knowledge as IT professionals making them uniquely qualified to identify any security weaknesses and provide solutions to ensure a successful remediation.

TECH LOCK offers substantial expertise in partnering with both covered entities as well as business associates. Our team understands how HITRUST applies to a business associate's business.
