

# Log Management

One of the biggest challenges about logging is determining which details to log. Logs are an essential and valuable resource for security and compliance. However, log management is tedious with setting logging frequency, managing expanding storage needs, and maintaining log retention requirements. The centralized management and safekeeping of logs are a burden that many organizations would like to offload, and yet still have quick access to the data they hold.

**TECH LOCK provides Log Management that removes the overhead of local management. Customers have 24/7 access to their portal to easily review logs and run reports while our service takes care of the rest:**

- Guidance on log tuning, what to log based on device, business, and compliance needs.
- Log collection and centralization.
- Normalize logs across the organization, indexing, and making them searchable.
- Log storage retention for 365 rolling days.
- Ability to expand the range of log sources and support security devices, endpoints, directory services, applications, databases, cloud environments, and cloud applications like Office 365 and others.
- Built-in basic alerts and required for compliance.

## BENEFITS WITH TECH LOCK

- ✓ Raw logs hold the events and activities that provide the foundation for security and compliance management - ensure they are safe and accessible
- ✓ A way to utilize enterprise-grade security device and endpoint logfiles without the management overhead
- ✓ Review logs and search with criteria such as geo-location, type of log, and date range
- ✓ Streamline audits by having quick access to logs and historical records of log review activities

## WHY USE TECH LOCK?

TECH LOCK enables organizations to navigate, detect, and respond to today's modern cybersecurity and compliance challenges. Our focus is adaptive managed security services. Security operations, industry-leading technology, premium threat detection, enriched with independent cyber research. Cohesive security and compliance services delivering measurable outcomes and personalized support to our clients.

## Managed Security and Compliance Service Methodology

The technologies that TECH LOCK provides are best-in-breed in security and detection capabilities. However, technologies alone do not provide a cohesive solution. It takes the combination of people, process, and technology to ensure continuous security and compliance coverage. Our security engineers ensure an exact fit for your business needs.

Regardless of the mix of services with TECH LOCK, we use a standardized method. From this process, we can provide continuous adaptive detection of security and compliance risk but tailored for your business. TECH LOCK manages the orchestration across all our offered services. Our cohesive solution delivers better outcomes for our customers, whether they subscribe to one or all of our services.
